

# OnHScroll

Fires when the user scrolls the panel horizontally.

## Parameters

Parameter	Description
Left	The new Left position.

## Remarks

The OnHScroll event fires when the user causes the panel to scroll horizontally by either manipulating the scroll bar directly or by tabbing to a control that causes the panel to auto scroll.

The Left parameter is provided for convenience and contains the new horizontal scroll value. It is equivalent to the [Left](#) property.

## Example

```
Transfer Param1 to Left

// Synchronize scrolling with another panel
Set_Property(@Window:".OLE_PANEL_OTHER", "OLE.Left", Left)
```
