

OnVScroll

Fires when the user scrolls the panel vertically.

Parameters

Parameter	Description
Top	The new Top position.

Remarks

The OnVScroll event fires when the user causes the panel to scroll vertically by either manipulating the scroll bar directly or by tabbing to a control that causes the panel to auto scroll.

The Top parameter is provided for convenience and contains the new vertical scroll value. It is equivalent to the [Top](#) property.

Example

```
Transfer Param1 to Top

// Synchronize scrolling with another panel
Set_Property(@Window:".OLE_PANEL_OTHER", "OLE.Top", Top)
```
