

READ

Description

Read data into a form from a database.

Syntax

bforward = **READ** (*ctrlentID*, *ctrlclassID*)

Parameters

READ accepts arguments for the following parameters.

Parameter	Description
<i>ctrlentID</i>	Has the format <i>WindowName.ControlName</i> , where <i>WindowName</i> is the identifier of the window that contains the affected control, and <i>ControlName</i> is the identifier of that control. Notice that a period separates the two values.
<i>ctrlclassID</i>	The type of control. Window control is the only valid entry.

Returns

True or false. If false, then program execution returns to the calling procedure. If true, then event processing goes to the next level.

[WRITE event](#), [DSOEXECUTE event](#), [NOTEREAD event](#)

Remarks

The READ event does not send any NOTEREAD events.

Example

```
/* Using the Forward_Event function, pre- and post-read processing is possible: */

function read(ctrlentid, ctrlclassid)
declare subroutine Forward_Event
* pre-read processing
Forward_Event()
* post-read processing
return 0
```
