

Detach_Volume Subroutine

Description

Temporarily excludes a volume from access by OpenInsight. To make this permanent, run Define_Database, or use Database Manager.

Syntax

Detach_Volume (*locationlist* , *status*)

Parameters

The Detach_Volume subroutine has the following parameters.

Parameter	Description
<i>Locationlist</i>	Specifies the location of the existing volume. Can be specified in any of the following ways: [<i>location</i>] <i>volume_pointer_name</i> Typically, this value will be the path to a directory containing Native Tables.
<i>status</i>	Status code, indicating success or failure. If 1, successful; otherwise, failure.

Example

```
/* Detach the DATAVOL volume. */  
Call Detach_Volume("DATAVOL", status)  
If status <> 1 Then GoSub Error_Processing
```
