

Get.RecCount Function

Description

Returns the number of rows in a native table.

Syntax

rowcount = **Get.RecCount** (*filevar*, *status*, *forcecount*)

Parameters

The Get.RecCount function has the following parameters.

Parameter	Description
<i>filevar</i>	The file variable for the source file.
<i>Status</i>	Success flag.
<i>forcecount</i>	A true or false value. If true, an explicit record count is performed.

Get.RecCount returns the number of records in the file if it was able to access the file. Otherwise, 0 is returned in status.

Example

```
/* this code fragment */
Declare Function Get.RecCount
Count = 0
filename = "CUSTOMERS"
Open filename To filevar Then
    count = Get.RecCount (filevar, flag, 0)
    If flag Else
        /* unable to invoke Get.RecCount() - handle error */
    End
End
Return Count
```
