

IsValidUser Function

Description

Determines whether the user is a valid user for the database.

Syntax

```
retval = IsValidUser(databaseId, username)
```

Parameters

The function has the following parameters:

Parameter	Description
databaseID	The database name.
username	The user name.

Returns

Boolean value. If the user is valid then True (1) is returned, if the user is not valid then False (0) is returned.

Example

```
declare function IsValidUser  
isValid = IsValidUser( @dbid, "ELVIS" )
```
