

LCASE Function

Description

Converts the input parameter's contents from upper/mixed case to lower case.

Syntax

convertedText = **LCASE**(*text*)

Parameters

The function has the following parameters:

Parameter	Description
<i>text</i>	A string of data.

Returns

Lower case text.

Remarks

The function is a wrapper around a "convert @upper_case to @lower_case in text" statement. It is more efficient to use a "convert" statement than to use the LCASE function.

Example

```
declare function LCASE

text = "All work and no play make Jack a dull boy."
lText = LCASE( text )

* After execution, lText will contain "all work and no play make jack a dull boy."
```
