

OI_GET_LOCALE_DATE Function

Description

Returns the short date within the local format.

Syntax

returnDate = **OI_GET_LOCALE_DATE**(*inDate*)

Parameters

The function has the following parameters:

Parameter	Description
inDate	A date in Internal format. Defaults to the current date if null.

Returns

A date in output converted format based on the local format.

Remarks

The function will use the Environment Settings Locale to determine the locale. If the Environment Setting is not used, the function will return a date based on the operating system.

Example

```
* If invoking the function from a European locale on 30 April 2010
date = 15461
localDate = OI_Get_Locale_Date( date )
* localDate will contain "30/04/2010"
```
