

# Ping Statement

## Description

Sends a signal to an IP address.

## Syntax

*retval* = **Ping**(*IPAddress*)

## Parameters

The function has the following parameters:

Parameter	Description
IPAddress	The IP address of a remote location.

## Returns

An @fm delimited array of the IPAddress and the number of milliseconds it took to connect to the address.

## Example

```
declare function Ping
retval = Ping("www.revelation.com")
if retval then
    swap @fm with '|' in retval
    call msg(@window,'Ping returned :' retval)
end
```
