

Serial Function

Description

Returns the OpenInsight serial number.

Syntax

serial_number = **Serial()**

Parameters

The Serial() function returns the string value of the current serial number. The Serial() function can be used to limit the use of application software written in BASIC+ to a specific copy of OpenEngine.

The serial number can be read, but cannot be modified.

Example

```
* Program will exit, if serial number 299 is not returned.  
if Serial() NE 299 then Return
```
