Transact Subroutine

Description

Controls transaction processing.

Note: The TRANSACT volume (in the RevSoft\OI32bit folder) must be attached for transaction control to be enabled.

Syntax

Transact *(Action, SQLstate)*

Parameters

The Transact subroutine has the following parameters.

Parameter	Description
Action	Action requested for transaction processing: | Action	Meaning
0	Rollback transaction
1	Commit transaction
2	Initialize transaction processing	
SQLstate	A variable which, after the call to Transact, will hold the return code. If SQLstate = 0, the call was successful. Otherwise, the call was unsuccessful. Pass a variable initialized to null.
