

# SRP Panel Control

The *SRP Panel Control* is a control that hosts OI controls or forms inside a scrollable pane. This allows developers to present a large group of related controls in a smaller area. You can host an number of controls from the same form as the SRP Panel Control or host a single separate form. Since OI's presentation server doesn't enforce parent to child relationships, the controls maintain almost all behavior within the panel, including events.

The icon shows a scrollable panel with a vertical scrollbar on the right and horizontal scrollbars at the bottom. Inside the panel, there are several rectangular controls, some with text and some with buttons. A curved arrow indicates the scrollable nature of the panel.
