

# GetVersion

Returns the version of the SRP HTTP Framework being used.

## Syntax

```
Response = HTTP_Services('GetVersion')
```

## Returns

The version of SRP HTTP Framework.

## Parameters

N/A

## Remarks

The information is stored in the [SRP\\_HTTP\\_FRAMEWORK\\_VERSION](#) configuration record. The response will be in the following format:

```
x.x.x [RCx]  
mm.dd.yyyy hh:mmA/P
```

A carriage-return/line-feed character will be used to separate the two pieces of information.
