SRP Application Launcher

Applications, especially if they are vertically and commercially available, require a professional image. End users expect short-cuts that point to an executable with a file name that they recognize (e.g. Word.exe, Explorer.exe, PhotoShop.exe, etc.) However, OpenInsight requires short-cuts that point to OINSIGHT.exe with command line parameters to help inform the system how to launch. The ***SRP Application Launcher*** was created to resolve this problem as well as provide increased control over the launching and re-launching of OpenInsight applications.
