

# SRP\_Get\_Clipboard

Gets the plain text currently on the clipboard.

## Syntax

```
Text = SRP_Get_Clipboard()
```

## Returns

The current plain text on the clipboard.

## Remarks

The SRP\_Get\_Clipboard gets the clipboard text. It does the same thing as calling Get\_Property("CLIPBOARD", "TEXT") but without requiring the presentation server context. Thus, it is safe to use in OEngines running outside of OpenInsight.

## Examples

```
Text = SRP_Get_Clipboard()
```
