3.x - Creating a Web Service

Obviously the main objective of working with the SRP HTTP Framework is to create one or more web services (aka APIs). There is a special sense of satisfaction when you can create your first web service routine and see it respond to a web request. Creating a web service can be very complex or very easy, depending upon the requirements of the web service. The list of articles below are intended to help you get your first web service working:

- 3.x - URL Paths and Web Services
- 3.x - Pass Throughs and End Points
- 3.x - Preparing the Response
