

## 3.x - Installation

The SRP HTTP Framework ships automatically with the full SRP FrameWorks product. If you already have the full product, you will not need to worry about inventory review since you won't be installing anything that will conflict with the base SRP FrameWorks entities. In this case, please skip the first two articles below and go directly into the [3.x - Post-Installation Configuration](#) article.

If you purchased this module separately then please review all of the following articles to ensure a smooth installation process.

In all cases, make sure you following the steps outline in the [3.x - Testing for Success](#) article.

- [3.x - Pre-Installation Inventory Review](#)
- [3.x - Installing the SRP HTTP Framework](#)
- [3.x - Post-Installation Configuration](#)
- [3.x - Testing for Success](#)
