

SearchIndex

Description

Returns an @FM delimited list of Key IDs that match the search value.

Syntax

```
rv = Database_Services("SearchIndex", TableName, ColumnName, SearchValue, UpdateIndex)
```

Parameters

Parameter	Description
<i>TableName</i>	[REQUIRED] The linear hash database table name.
<i>ColumnName</i>	[REQUIRED] The KeyID to the database table.
<i>SearchValue</i>	[REQUIRED] The value being searched for.
<i>UpdateIndex</i>	[Optional] Boolean flag to determine if the index for the indicated column should be updated before searching.

Remarks

This is basically a wrapper around Update_Index and Btree.Extract.

Version

16.0.18
