

VerifyLH

Description

Performs a health check against the indicated tables and returns back any issues. All results are stored in the SYSLHVERIFY table with a KeyID of VolumeLabel*DatabaseID*TableName. Returns the list of groups that have GFEs or returns an empty string if there are none. The list of GFEs or empty strings will themselves be @FM delimited to correspond with the tables passed into this service.

Syntax

```
rv = Database_Services("VerifyLH", TableName, SaveList)
```

Parameters

Parameter	Description
<i>TableNames</i>	[REQUIRED] One or more linear hash database tables to verify. List should be @FM delimited.
<i>SaveList</i>	[Optional] Name of a saved selection of linear hash database tables to verify. This argument will be ignored if TableNames is populated.

Remarks

Note: This uses the Verify_LH subroutine to check for GFEs.

Version

16.0.18
