

Version History

3.0.3

January 22, 2025

- Added ability to set Config<8> of [SRP_Send_Mail](#) to "TLS11", "TLS12", or "TLS13"
- Added ability to set UseTLS parameter of [SRP_Mail SendUsing](#) service to "TLS11", "TLS12", or "TLS13"
- Updated to always use TLS 1.2 by default instead of system default
- Fixed attachments getting permanently locked

3.0.1

November 8, 2021

- Fixed bug where only the first of multiple attachments would send

3.0

August 12, 2021

- Rewritten using .NET (requires RevDotNet)
- Added [SRP_Mail](#) service module
- Fixes bug in 2.x where email could send with incorrect date

2.1.2

- Fixed bug where SRP_Send_Mail would crash if body contained lines with just periods.

2.1.1

- Added support for whitespace after commas in comma-delimited email address lists.

2.1

- Added 64-bit support.
- Added support for new SRP Licensing system.

2.0.2

- Fixed licensing bug.
- Improved SRP Mail Demo form.

2.0.1

- Fixed bug where PDF attachments wouldn't open in some email clients.

2.0

- Added support for TLS.
- Added support for named emails, e.g., "John Doe(johndoe@[somedomain.com](#))"

1.2

- Added new field to Config parameter to support SSL.

1.1.1

- Updated name from SRPSendMail to SRP_Send_Mail. SRPSendMail is still included for backward compatability.

1.1

- Added support for SRPLicense.dll to simplify licensing

1.0

- Initial Release
