

Autosize

Determines if the control should decide the number of visible months based on its size.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Autosize", Boolean)
```

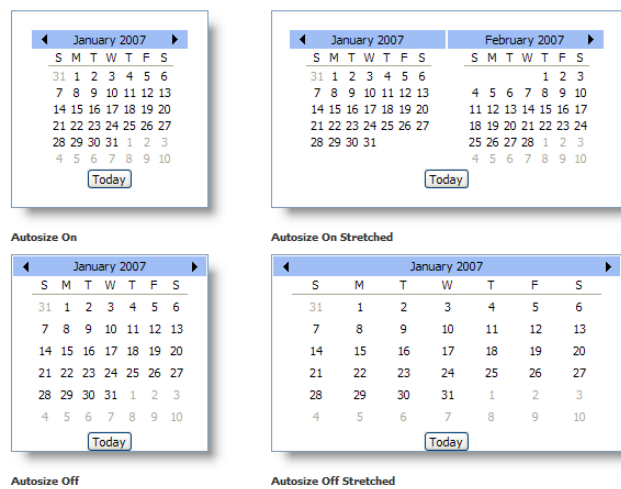

Values

[True | False]

Default: True

Remarks

The Autosize property enables or disables automatic sizing and positioning of months. When enabled, the control automatically adds or removes months to acheive the best possible fit. When disabled, the [GridSize](#) property determines the number of visible months.

When Autosize is disabled, all months expand to fit the control. When Autosize is enabled, the months maintain a balanced margin.

Example

```
// Disable autosize and set a new grid size
Set_Property(@Window:".OLE_DATEPICKER", "OLE.Autosize", 0)
Set_Property(@Window:".OLE_DATEPICKER", "OLE.GridSize", 2:@FM:2)
```
