

Font

The font used to render the control.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Font", FontArray)
```

Values

The *FontArray* structure uses the same formatting as the OpenInsight FONT property. Visit the [Font](#) common OLE property page for further documentation.

Default: Tahoma, 8 pt.

Remarks

The Font property establishes the font used to render all the elements of the date picker control. The same font is used to render the header, days of week, week number, days, and buttons. Use it to set the overall look and feel of the whole control.

Use the [DayStyle](#) property to change the font of individual days.

Example

```
// Change the font to Courier New
Set_Property(@Window:".OLE_DATEPICKER", "OLE.Font", "Courier New")
```
