

Range

The minimum and maximum allowable dates.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Range", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Minimum Range	Option	The minimum date range	Infinite
<2>	Maximum Range	Option	The maximum date range	Infinite

Remarks

The Range property establishes the minimum and maximum allowable dates. Normally, users can scroll indefinitely forward or backward, but setting this property establishes a scrolling limit. The property value has two fields: minimum range and maximum range.

Each field can be one two types of values

Value	Description
Infinite	Removes limit
Date	Limit date

Use the literal value of "Infinite" when you want to remove the limit altogether. To set a limit, pass a date in OpenInsight's internal format.

Example

```
// Limit the range to 2007
Set_Property(@Window:".OLE_DATEPICKER", "OLE.Range", IConv("1/1/2007", "D"):@FM:IConv("12/31/2007", "D"))

// Remove limits
Set_Property(@Window:".OLE_DATEPICKER", "OLE.Range", "Infinite":@FM:"Infinite")
```
