OnContextMenuClick

Fired when a menu item on the custom context menu is clicked

Parameters

Parameter	Description
ItemKey	The key of the item clicked
UserData	The data originally passed when showing the context menu

Remarks

The OnContextMenuClick event fires when the user clicks on an item withing the context menu that was created with a call to the ShowContextMenu method.

The ItemKey parameter is the unique key you associated with the item when you create it. So, if you created an item with the key "1" whose text was "Copy", then this parameter would be "1".

The UserData parameter contains the data you passed into the UserData parameter of the ShowContextMenu method. It is passed for your convenience.

Example

```
Transfer Param1 to ItemKey
Transfer Param2 to UserData

Begin Case
   Case ItemKey EQ "CUT"  ; GoSub Cut
   Case ItemKey EQ "COPY" ; GoSub Copy
   Case ItemKey EQ "PASTE" ; GoSub Paste
   Case ItemKey EQ "ZOOMIN" ; GoSub Zoom_In
   Case ItemKey EQ "ZOOMOUT" ; GoSub Zoom_Out
End Case
```
