Background

The button's background.

Usage

```
Set_Property(OLECtrlEntID, "OLE.Background", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Normal Background	Color Fill	The background of the button in its normal state	None
<2>	Hot Background	Color Fill	The background of the button used when the user hovers the mouse over it	None
<3>	Pushed Background	Color Fill	The background of the button used when the user presses it	None
<4>	Disabled Background	Color Fill	The background of the button used when it is disabled	None
<5>	Focus Background	Color Fill	The background of the button used when is has focus	None

Remarks

The Background property establishes a custom look and feel for your button's background. Any value passed to one of these fields will override the background used by the current Style property.

The **Normal Background** field allows you to specify the button's background in its rested state. The **Hot Background** field is used when the user hovers over the button with the mouse. The **Pushed Background** field establishes the background for the button while it is being pressed or is in a checked state. The **Disabled Background** field sets the background for the button while it is disabled. Finally, the **Focus Background** sets the background of the button while it has focus.

Note that for any field set to "None", the background in that state is determined by the Style property. If you prefer to have no background appear when a field is set to "None", then set the BackVisible property to 0.

Example

```
// Create a nice shiny look and feel
Background = ""
Background<1> = "Vertical(Gradient(S L=90, S L=80, 30%), Gradient(S L=75, S L=80), Border(S L=50))"
Background<2> = "Vertical(Gradient(S C S=100 L=90, S C S=100 L=80, 30%), Gradient(S C S=100 L=75, S C S=100
L=80), Border(S C S=100 L=50))"
Background<3> = "Vertical(Gradient(S C S=100 L=80, S C S=100 L=70, 30%), Gradient(S C S=100 L=65, S C S=100
L=70), Border(S C S=100 L=40))"
Background<4> = "Vertical(Gradient(S C S=0 L=90, S C S=0 L=80, 30%), Gradient(S C S=0 L=75, S C S=0 L=80),
Border(S C S=0 L=50))"
Background<5> = "Vertical(Gradient(S C S=100 L=90, S C S=100 L=80, 30%), Gradient(S C S=100 L=75, S C S=100
L=80), Border(S C S=100 L=50))"
Set_Property(@Window:".OLE_BUTTON", "OLE.Background", Background)
```
