

# Font

Sets the font attributes for the Caption text of the OLE Button.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.Font", FontArray)
```

## Values

The *FontArray* structure uses the same formatting as the OpenInsight FONT property. Visit the [Font](#) common OLE property page for further documentation.

**Default:** Tahoma, 8 pt.

## Remarks

This is the same as the FONT property used by native OpenInsight controls. It uses the identical @SVM delimited array for the font structure which is generated when using the Utility("CHOOSEFONT") service.

## Example

```
// Set the caption property to "Click Me!" and then
// change the Font property to Tahoma, 10pt, Bold, Italic.
Set_Property(@Window:".OLE_BUTTON_CLICK_ME", "OLE.Caption", "Click Me!")
FontArray = "Tahoma" : @SVM : "-13" : @SVM : 700: @SVM : "1" : @SVM : "0" : @SVM : "0"
FontArray := @SVM : "0" : @SVM : "34" : @SVM : "0" : @SVM : "3" : @SVM : "2" : @SVM : "1"
Set_Property(@Window:".OLE_BUTTON_CLICK_ME", "OLE.Font", FontArray)

// Allow the end user to choose a font using the CHOOSEFONT
// service and then set the Font property of the test button.
FontArray = Utility("CHOOSEFONT")
Set_Property(@Window:".OLE_BUTTON_TEST", "OLE.Font", FontArray)
```
