Handle

The button's window handle.

Usage

```
Value = Get_Property(OLECtrlEntID, "OLE.Handle")
```

Values

Value can be any positive or negative whole number:

Remarks

The Handle property can be used to get the control's handle, but it cannot be set. It is a read only property.

There is also a HANDLE property in OI, so be sure to use the "OLE." prefix to ensure that you are using the OLE property and not the OI property.

Example

```
// Get the button's handle
Handle = Get_Property(@Window:".OLE_BUTTON", "OLE.Handle"
```
