

Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP Button Control:

Method	Description	Version Introduced
AboutBox	Displays the control's about box.	
DisableComboMouseWheel	Disables mouse wheel scrolling for OpenInsight combo boxes	
DoClick	Programmatically fires the OnClick event	
LoadRawImage	Loads the Icon property from raw image data instead of an image file.	
Refresh	Redraws the control.	
ShowContextMenu	Displays a context menu at the given mouse point.	3.0.3
