

DoClick

Programmatically fires the OnClick event

Syntax

```
rv = Send_Message(Ctrl, "OLE.DoClick", Point, Button, Shift, Ctrl)
```

Parameters

Parameter	Description
Point	The mouse coordinates
Button	The button pressed
Shift	Shift key status
Ctrl	Control key status

Remarks

The DoClick method programmatically fires the button's OnClick event. The parameters are passed "as is" through the event, so be sure to adhere to the parameter format and values described in the OnClick event. (See the OnClick event for details).

Example

```
// Fire the on click event for the left mouse button  
rv = Send_Message(@Window:".OLE_BUTTON", "OLE.DoClick", "0,0", "Left", 0, 0)
```
