

BlankRowManagement

Preferences for automatic adding/removing of bottom blank records.

Usage

```
Set_Property(OLECtrlEntID, "OLE.BlankRowManagement", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Remove Blank Records on Lost Focus	Boolean	Removes blank records from the bottom of the edit table when it loses focus	0
<2>	Add Blank Record when Getting Focus	Boolean	Adds a blank record to the bottom of the edit table if there isn't one already there	0

Remarks

The BlankRowManagement property provides a convenient way to maintain clean tables. You can use this property to specify that blank records at the bottom of the table are automatically removed when it loses focus. Furthermore, you can request that a new blank record is appended to the table when it gains focus.

Example

```
// Let the table perform full blank row management
Set_Property(@Window:".OLE_EDITTABLE", "OLE.BlankRowManagement", 1:@FM:1)

// Remove blank records on lost focus, but force the user to have to add new records manually
Set_Property(@Window:".OLE_EDITTABLE", "OLE.BlankRowManagement", 1:@FM:0)

// Always add blank records on got focus, but leave them there when the user leaves
Set_Property(@Window:".OLE_EDITTABLE", "OLE.BlankRowManagement", 0:@FM:1)
```
