

CellCheckEnabled

Establishes whether a cell's check box is enabled or disabled.

Usage

```
Set_Property(OLECtrlEntID, "OLE.CellCheckEnabled[field; record]", Boolean)
```

Values

[True | False]

Default: True

Indices

Index	Description
field	Index to an existing field
record	Index to an existing record

Remarks

The CellCheckEnabled property provides a way to enable or disable a check box in a cell. Set this to TRUE to enable or FALSE to disable. By default, check boxes are enabled and are not affected by the value of the [CellProtection](#) property. To get or set the value of the check box, use the [CellCheck](#) property.

This property is only valid for cell's whose [CellType](#) property has been set to "Check Box."

Example

```
// Disable all check boxes in the first column
Set_Property(@Window:".OLE_EDITTABLE", "OLE.CellCheckEnabled[1; All]", 0)

// Enabled all check boxes
Set_Property(@Window:".OLE_EDITTABLE", "OLE.CellCheckEnabled[All; All]", 1)
```
