

CellPadding

The number of pixels between a cell's edge and it's contents.

Usage

```
Set_Property(OLECtrlEntID, "OLE.CellPadding[field; record]", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Left Padding	Integer	The number of pixels between the cell's left edge and its contents	2
<2>	Top Padding	Integer	The number of pixels between the cell's top edge and its contents	1
<3>	Right Padding	Integer	The number of pixels between the cell's right edge and its contents	3
<4>	Bottom Padding	Integer	The number of pixels between the cell's bottom edge and its contents	1
<5>	Image Padding	Integer	The number of pixels between the cell's image and its text	3

Indices

Index	Description
field	Index to an existing field
record	Index to an existing record

Remarks

The CellPadding property establishes the number of pixels between a cell's edge and its contents. This allows you to further align the contents to some other point than a cell's edge. You can also establish the distance between the cell's image and its text.

A cell's contents are clipped to according the padding, not the cell bounds.
