

CellPrompt

A caption to appear within the cell, separate from the cell's contents.

Usage

```
Set_Property(OLECtrlEntID, "OLE.CellPrompt[field; record]", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Prompt	Text	The prompt caption	""
<2>	Font	Font	The font used to render the prompt	Tahoma, 8 pt., Italic
<3>	Color	Color	The color used to render the prompt	GrayText
<4>	Horizontal Alignment	Option	The horizontal alignment of the prompt within the cell	Left
<5>	Vertical Alignment	Option	The vertical alignment of the prompt within the cell	Top
<6>	Appear When Empty	Boolean	Indicates whether or not the prompt only appears when the cell is empty	0
<7>	Appear When Selected	Option	Indicates how the prompt appears when the cell is selected	None

Indices

Index	Description
field	Index to an existing field
record	Index to an existing record

Remarks

The CellPrompt property provides you with a way to prompt users for input. Think of cell prompts as labels built right into the cell. This multivalued property has the following fields:

Prompt

This is the actual text of the prompt. It will be displayed exactly as entered.

Font

The Font field allows you to customize the font used to render the prompt. Make it smaller, larger, bold, italic, etc. to meet your needs. This field uses the standard [Font](#) format.

Color

The Color field sets the color used to draw the prompt. This can be set to a valid [Color](#) value.

Horizontal Alignment

This field determines where the prompt should appear within the cell horizontally. Set this field to "Left", "Center", or "Right" to position the prompt on the left, horizontally centered, or on the right respectively.

Vertical Alignment

This field determines where the prompt should appear within the cell vertically. Set his field to "Top", "Center", or "Bottom" to position the prompt on the top, vertically centered, or on the bottom respectively.

Appear When Empty

This flag can be used to control when the prompt should appear. The prompt is always visible by default, but this could conflict with the cell's contents. By setting this flag to 1, you establish that the prompt should disappear when the cell has contents to display.

Appear When Selected

This flag can be used to control when the prompt should appear. The prompt is always visible by default, but if many cells use prompts, your table can begin to look cluttered. Use this field to limit when the prompt should appear. Set this field to "Row", "Col", "Both", or "None". Setting this field to "Row" will show the prompt only when the cell's row is selected. Setting this field to "Col" will show the prompt only when the cell's column is selected. Setting it to "Both" will show the prompt only when the cell itself is selected. The default setting is "None", which means the prompt will appear all the time for that cell.

Example

```
// Add a prompt that will appear in the top left corner of a field
Prompt = ""
Prompt<1> = "Name"
Prompt<2> = "Arial":@SVM:7:@SVM:700:@SVM:0 // Smaller Bold Font
Prompt<3> = "GrayText" // Lighten the prompt
Prompt<7> = "Row" // Only appear when the row is selected
Set_Property(@Window:".OLE_EDITTABLE", "OLE.CellPrompt[1;All]", Prompt)
```
