

ComboDropDown

Shows or hides the selected cell's combo box dropdown.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ComboDropDown", Boolean)
```

Values

[True | False]

Default: False

Remarks

The ComboDropDown property allows programmatic control over the visibility of the selected cell's combo box dropdown. Since only the selected cell can show a dropdown, there is no need to provide an index to an arbitrary cell. Simply pass 1 to this property to show the dropdown or 0 to hide it.

Nothing happens if no cell is selected or if the selected cell is not a Combo Box type cell.

Example

```
// Show the combo box drop down
Set_Property(@Window:".OLE_EDITTABLE", "OLE.ComboDropDown", 1)

// Determine if the combo box is visible or not
IsComboVisible = Get_Property(@Window:".OLE_EDITTABLE", "OLE.ComboDropDown")
```
