

# HANDLE

The table's window handle.

## Usage

```
Value = Get_Property(OLECtrlEntID, "OLE.HANDLE")
```

## Values

*Value* can be any positive or negative whole number:

## Remarks

The Handle property can be used to get the control's handle, but it cannot be set. It is a read only property.

***Since there is also a HANDLE property in OI, so be sure to use the "OLE." prefix to ensure that you are using the OLE property and not the OI property.***

```
Handle = Get_Property(@Window:".OLE_EDITTABLE", "OLE.Handle")
```
