

# HeaderArrow

A header cell's sort arrow.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.HeaderArrow[col; row]", StringValue)
```

## Values

*StringValue* can be any string meeting the following format requirements:

**Syntax:** "Up" for an up arrow; "Down" for a down arrow; "" for no arrow.

**Default:** ""

## Indices

Index	Description
col	Index to an existing header column
row	Index to an existing header row

## Remarks

The HeaderArrow property provides a way to display an arrow indicating sort direction. The arrows are drawn in runtime using system colors, so they may look more appealing than bitmaps. The arrows always appear to the right of the header caption if is left of center aligned and to the left of the header caption if it is right aligned.

Set this property to "Up" if you want an up arrow, "Down" if you want a down arrow, or "" if you want no arrow at all.

***You are still responsible for sorting the data within the table programmatically. This property merely provides a convenient way to show arrows.***

## Example

```
// Show an up arrow on the first data column's header
Set_Property(@Window:".OLE_EDITTABLE", "OLE.HeaderArrow[2; 1]", "Up")
```
