

# HeaderToolTip

A header cell's tooltip text

## Usage

```
Set_Property(OLECtrlEntID, "OLE.HeaderToolTip[col; row]", Text)
```

## Values

*Text* can contain anything. For example: "My Tooltip"

**Default:** ""

## Indices

Index	Description
col	Index to an existing header column
row	Index to an existing header row

## Remarks

The HeaderToolTip property provides the ability to set an alternative tooltip caption for any given header. For example, you can provide additional help on the meaning of a header.

Header tooltips will not exceed a width of 300 pixels. Instead, the tooltip will perform text wrapping, thus making it a multilined tooltip.

Alternatively, you may pass Char(13):Char(10) to force line breaks.

## Example

```
// Set a header tooltip
Set_Property(@Window:".OLE_EDITTABLE", "OLE.HeaderToolTip[1; 1]", "This is a tool tip...")
```
