ImageList

A single bitmap containing all images used by the table.

Usage

```
Set_Property(OLECtrlEntID, "OLE.ImageList", Array)
```

Values

Array has the following structure:

Pos	Name	Type	Description	Default
<1>	Image Path	Formatted String	The path to an image containing all images to be used	""
<2>	Frame Count	Integer	The number of frames into which the image is to be equally divided	1
<3>	Transparent Color	Formatted String	The image color not to be drawn	Auto

Remarks

The ImageList property allows you to set a single bitmap containing all images used in the edit table. The image is then divided into equal 'frames' which can be displayed in cells or option buttons. Furthermore, you can set a bitmap color to be transparent, i.e., you can choose the color not to be drawn.

Refer to the Image type documentation for details on how to load images.

Example

```
// Load the image list from a zip file (the image has 5 frames)
Set_Property(@Window:".OLE_EDITTABLE", "OLE.ImageList", "Images.zip#tableimage.png":@FM:5)
```
