

Common OLE Property Types

OpenInsight uses a type-less programming language, and SRP has designed the SRP OLE Controls to fit neatly into the BASIC+ environment. Still, types can be useful in communicating what information is acceptable to a certain OLE control property. Therefore, SRP documents the type of information a property accepts. This is a useful way to provide a single place to document common property values that appear in many properties across many controls.

Type	Description
Boolean	Static and dynamic color values.
Color	Flat color options based on RGB, HSL, or named colors.
Color Fill	Simple and complex fill patterns.
Decimal	Positive or negative, whole or fractional numbers.
Font	Multivalues describing a font pattern.
Formatted String	String data in a pre-defined format.
Image	Structure defining location and behavior of images.
Integer	Positive or Negative, Whole numbers.
Multivalue	Multiple delimited values.
Option	String data accepting data only from a list of pre-defined values.
Text	String data.
