

Events

OLE control events provide a way for the OLE control to communicate back to OpenInsight. Once an event has been qualified using OI's QUALIFY_EVENT message, then the OLE control will fire the event to OpenInsight allowing you to respond to any one of the control's predefined actions. Some events allow you to stop certain actions before they occur, so be sure to read the Remarks section of each event carefully. The following events apply to the SRP Popup Control:

Event	Description	Version Introduced
OnCollapsing	Fired when the popup first begins disappearing.	
OnExpanding	Fired when the popup first begins appearing.	
OnHide	Fired when the popup completely disappears	
OnItemClick	Fired when the user clicks on a popup item.	
OnShow	Fired when the popup becomes completely visible.
