Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP Ribbon Control:

Method	Description	Version Introduced
AboutBox	Displays the control's about box.	3.2
AddControls	Adds new controls to existing groups and other control containers.	3.2
AddGroups	Adds new groups to existing tabs.	3.2
AddTabs	Adds new tabs to the control.	3.2
Clear	Removes all tabs, controls, commands, and backstage elements.	4.0.2
DisableCommands	Disables all controls bound to the given list of commands.	4.0.1
EmbedWindow	Embeds a given window into a backstage page.	3.2
EnableCommands	Enables all controls bound to the given list of commands.	4.0.1
HideCommands	Hides all controls bound to the given list of commands.	4.0.1
Init	Initializes the ribbon in a single call with XML.	3.2
LayoutChildControl	Tells the Ribbon control where to size and position a child control on the form.	4.2.2
RemoveControls	Removes existing controls.	3.2
RemoveGroups	Removes existing groups.	3.2
RemoveTabs	Removes existing tabs.	3.2
ShowCommandContextMenu	Displays a context menu at the given mouse location using the current ribbon theme.	4.0.2
