Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP Schedule Control:

Method	Description	Version Introduced
AddAppts	Adds one or more appointments to the control.	
AddTimeBlocks	Adds one or more time blocks to the control.	3.1.1
EnsureVisible	Moves the entity or appointment into view.	
MapClientToTime	Maps a coordinate point to a schedule time.	
MapTimeToClient	Maps a schedule time to a coordinate point.	
RemoveAppts	Removes one or more appointments from the control.	
RemoveTimeBlocks	Removes one or more time blocks from the control.	3.1.1
RepositionItem	Rearranges the order in which entities and groups are displayed.	3.1.1
ShowContextMenu	Displays a context menu at the given mouse point.
