

Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP Subclass Control:

Method	Description	Version Introduced
AboutBox	Displays the control's about box.	
HideBalloonTooltip	Hides the visible balloon tooltip.	
ShowBalloonTooltip	Displays a balloon tooltip over a control.	
StringToColor	Converts an OLE Color String into an RGB color value	
Subclass	Subclasses an OI control.	
Tile	Tiles the MDI Children of a subclassed MDICLIENT control.	4.1.16
Unsubclass	Unsubclasses an OI control.
