

Methods

OLE control methods provide convenient one-time operations to developers. Unlike properties, whose values are persistent over the life of a control, methods represent actions that a control can perform. Often, methods will change the values of other control properties, so be sure to read the Remarks section of each method carefully. The following methods apply to the SRP Tab Control:

Method	Description	Version Introduced
AboutBox	Displays the control's about box.	
AddTab	Adds a tab to the control.	3.1.1
HandleToIndex	Maps a tab handle to its corresponding index.	3.1.1
IndexToHandle	Maps a tab index to its corresponding handle.	3.1.1
Refresh	Redraws the control.	
RemoveTab	Removes a tab from the control.	3.1.1
ShowContextMenu	Displays a context menu at the given mouse point.	
UnsubclassCtrl	Unsubclasses an OI control that the SRP Tab Control automatically subclassed.
