

# Using SRP Tree Control

The following tutorials will familiarize you with the SRP Tree Control. These white papers take a topical approach to explaining how to use the control. New users should start here, since many of these topics will give a deeper understanding of the control and the philosophies behind its design. Once you've grasped these concepts, use the reference guides for details on particular properties, methods, and events.

Topic	Description
<a href="#">Items</a>	Loading and managing items in the tree.
<a href="#">Keyboard Navigation</a>	Understanding how the user navigates the tree with the keyboard.
<a href="#">Item Images</a>	Loading images and assigning them to tree items.
<a href="#">Default Properties</a>	Setting and forgetting the default attributes of tree items.
<a href="#">Sorting</a>	Sorting individual items or the entire tree.
<a href="#">Conditions</a>	Taking advantage of conditional automation.
<a href="#">Drag and Drop</a>	Implementing a complete drag and drop solution.
