

Using SRP Tree Control

The following tutorials will familiarize you with the SRP Tree Control. These white papers take a topical approach to explaining how to use the control. New users should start here, since many of these topics will give a deeper understanding of the control and the philosophies behind its design. Once you've grasped these concepts, use the reference guides for details on particular properties, methods, and events.

Topic	Description
Items	Loading and managing items in the tree.
Keyboard Navigation	Understanding how the user navigates the tree with the keyboard.
Item Images	Loading images and assigning them to tree items.
Default Properties	Setting and forgetting the default attributes of tree items.
Sorting	Sorting individual items or the entire tree.
Conditions	Taking advantage of conditional automation.
Drag and Drop	Implementing a complete drag and drop solution.
