

OnBalloonClicked

Fired when the user clicks on a balloon tooltip.

Parameters

Parameter	Description
Cell	The cell whose balloon was clicked
Button	The button pressed during the click
Shift	Indicates whether or not the SHIFT key is down
Ctrl	Indicates whether or not the CONTROL key is down

Remarks

The OnBalloonClicked event is fired after the user clicks on a balloon tooltip to hide it.

The Cell parameter indicates the cell whose balloon was clicked. It contains the field and record location delimited by a semi-colon. For example, clicking the first button cell will return "1;1".

The Button parameter indicates the button that is used to fire the event. This value is "Left" if the left mouse button was pressed, "Middle" if the middle mouse button was pressed, or "Right" if the right mouse button was pressed. If the user clicked on the close button in the top right corner, then this parameter will be "Close" so you can distinguish between clicks on the surface of the tooltip from clicks on the close button

The Shift and Ctrl parameters indicate whether or not the SHIFT or CTRL keys, respectively, were pressed when the event was fired. If either key was pressed, then its corresponding parameter will have a value of 1.

Example

```
Transfer Param1 to Cell
Transfer Param2 to Button
Transfer Param3 to Shift
Transfer Param4 to Control

// Determine what was clicked
If Button EQ "Close" then
  // The user clicked the close button
end else
  // The user clicked elsewhere on the surface.
end
```
