OnComboClicked

Fired when the user clicks on an item in a combo dropdown.

Version Introduced: 3.0.2

Parameters

Parameter	Description
Cell	The cells whose combo dropdown item was clicked
Sel	The item in the dropdown that was clicked
Value	The value of the item in the dropdown that was clicked

Remarks

The OnComboClicked event fires only "Combo Box" type cells, and only when the user uses the mouse to click on an item.

The Cell parameter indicates the cell who was clicked. It contains the field and record location delimited by a semi-colon. For example, clicking the first button cell will return "1;1".

The Sel parameter is the index of the item within the combo drop down that was clicked. The Value parameter conveniently provides that same item's value.
