

# OnHeaderHyperClick

Fired when the user clicks on a hyperlink in a header cell.

## Parameters

Parameter	Description
HeaderCell	HeaderCell whose hyperlink was clicked
Point	The location of the cursor when the hyperlink was clicked
Button	The button used to the click the hyperlink
Shift	Indicates whether or not the SHIFT key is down
Ctrl	Indicates whether or not the CTRL key is down

## Remarks

The OnHeaderHyperClick event is fired when the user clicks on a hyperlink within a header cell.

The HeaderCell parameter indicates the header cell whose hyperlink was clicked. It contains the column and row location delimited by a semi-colon. For example, clicking on the hyperlink of the top left header cell will return "1;1".

The Point parameter indicates the relative location of the mouse cursor within the table when the hyperlink was clicked.

The Button parameter indicates which mouse button was used to the click the hyperlink and is one of three values: "Left", "Middle", or "Right".

The Shift and Ctrl parameters are boolean values indicating whether or not the SHIFT or CTRL key are down respectively.

## Example

```
Transfer Param1 to HeaderCell
Transfer Param2 to Point
Transfer Param3 to Button
Transfer Param4 to Shift
Transfer Param5 to Ctrl

// Show a balloon tooltip message when the hyperlink is clicked
rv = Msg(@Window, "You clicked the hyperlink for header cell: ":HeaderCell)
```
