

# Background

The control's background color.

## Usage

```
Set_Property(OLECtrlEntID, "OLE.Background", ColorFill)
```

## Values

*ColorFill* can be any [Color Fill](#) value.

## Remarks

The Background property establishes the background color for the control. This is the color seen behind the hypertext. Set this property to "None" if you want a truly transparent hyperlink control, i.e., if you want the parent window's background to show through.

## Example

```
// Place a light red, gradient background behind the hyperlink
Set_Property(@Window:".OLE_HYPERLINK", "OLE.Background", "Gradient(Pink, Red)")
```
